

Finally a wireless emulation solution that's engineered specifically for small portable devices

MOBILEACCESS CAN HELP YOU:

- Provide access to host applications from multiple warehouse and/or distribution centers, greatly reducing communications costs associated with managing a distributed network
- Mobilize warehouse functions with real-time barcode scanning and inventory management capabilities to improve the accuracy and productivity of warehouse operations
- Remotely manage your AS/400 environment, providing easy access to host administration tasks from anywhere, anytime

Strategi mobileACCESS™ is a new category of emulation solution that enables mobile devices to become a fully functional System i client, providing access to enterprise 5250 applications over WiFi and wide area networks.

ORDINARY EMULATORS CAN BE IMPRACTICAL TO USE – Many companies have tried to provide access to 5250 applications on mobile devices, but quickly discover the limitations of the device with ordinary emulators makes it impractical. The small screen makes the font too small to read and navigating the application is difficult without a keyboard and function keys. Whenever the device loses coverage, the workflow is interrupted, requiring the user to start over when coverage was restored.

PURPOSE-BUILT FOR WIRELESS DEVICES – Strategi mobileACCESS has been purpose-built for use on small portable devices and engineered to resolve these usability challenges. Its innovative features also make it a superior solution for laptop and sub-notebook power users.

PRESERVES SESSION CONTINUITY – Workflow continuity has been a significant challenge in the past. Imagine using a barcode scanner and scanning 30 of 50 pallets when the wireless connection is lost or the scanner is dropped and broken. The result is lost work and the need to start over. With Strategi mobileACCESS, the user can pick up another device, log back into the application and continue where they left off. When wireless access is interrupted, workflow remains uninterrupted after network coverage is restored.

FEATURES & BENEFITS

SmartPanning™

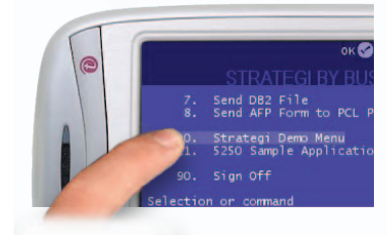

Enables the use of larger, easier to read fonts by auto-panning the screen when needed.

Screen Compaction

Dynamically refactors host screens to best fit the available display size.

Hotspot Navigation

Navigate by touch with dynamically generated hotspots.

Dynamic Icons

Dynamic icons replace function keys with meaningful icons for intuitive touch screen use.

Session Continuity

Enables users to move in and out of coverage without session interruption or loss of work in progress.

Host-based Administration

Easily support users with centralized host-based administration, eliminating the cost and time required to install and support host access software on mobile devices.

Native System i Software

Installs directly on the host eliminating security failure risks of gateways.

ABOUT ADVANCED BUSINESSLINK

Since 1987, ADVANCED BusinessLink has been pioneering the development of web-enablement, SOA and mobility solutions with their award-winning middleware software products. Our deep understanding of emerging technologies coupled with our core expertise in the IBM® System i platform, has enabled organizations to leverage their legacy investments and skills to evolve their technology to keep pace with industry best-practices.
